Questions For data types:

- What are the key features of Python? ...
- Differentiate between lists and tuples. ...
- Explain the ternary operator in Python. ...
- What are negative indices? ...
- Is Python case-sensitive? ...
- How long can an identifier be in Python? ...
- How would you convert a string into lowercase?

Questions for operators:

- What are the key features of Python? ...
- Differentiate between lists and tuples. ...
- Explain the ternary operator in Python. ...
- What are negative indices? ...
- Is Python case-sensitive? ...
- How long can an identifier be in Python? ...
- How would you convert a string into lowercase?

Questions for conditional and looping statements:

1. What keyword is used for looping?
2. What function can generate a list of numbers?
3. Name the 2 keywords used for looping?
4. What module is used for generating random values?
5. What keyword is used to skip back to the beginning of a loop?
6. What keyword is used to end looping completely?

Questions for functions:

- What are the key features of Python? ...
- Differentiate between lists and tuples. ...
- Explain the ternary operator in Python. ...
- What are negative indices? ...
- Is Python case-sensitive? ...
- How long can an identifier be in Python? ...
- How would you convert a string into lowercase?
-
